The containers are suitable as containers for clean or service water under atmospheric pressure. They are lightweight, storable and easy to handle.

## Construction characteristic

- made of high-density non-toxic linear polyethylene
- have a monolithic construction without critical points

## Usage

- are suitable as reservoirs of pure or service water under atmospheric pressure

## Technical parameters

- are resistant to UV radiation, algae formation, temperature fluctuations, impact and chemicals
- resistant to temperatures up to $60^{\circ} \mathrm{C}$
- they can be easily cleaned with conventional cleaning agents
- they are light, storable and easy to handle
- when installing, it is necessary to put the tank in a horizontal position
